Europe-Africa (€ per R)	0.1678	0.1678	0.00%
Asia-Pacific (Sing\$ per R)	0.2470	0.2470	0.00%

The sizes of the exchange rate adjustment each year are always equal to 5 times the actual period-to-period percentage change in the real-world exchange rates. Multiplying the actual % change by 5 is done so as to translate exchange rate changes over the few days between decision periods into changes that are more representative of a potential full-year change.
